

Solar Shelter Lighting | Leopold Memorial Gazebo Leopold War Memorial Committee, Geelong, VIC

BACKGROUND

Project brief: Leopold Memorial Park is home to The Leopold War Memorial; a site that in 1926 was set aside to honour local soldiers from the region. Created for the City of Greater Geelong in close partnership with the Leopold War Memorial Committee and the Australian Government as part of its Anzac Centenary Program. A newly constructed gazebo at the site required illumination but as the location is without power a solar lighting option was investigated.

OUR SOLUTION

Green Frog Systems have a solar powered solution designed for these types of applications. The GFS-50-MSL is a modular shelter light that can be adapted to suit all types of under cover sites such as sports facilities, shelters, BBQ areas, gazebos, and amenity blocks. The MSL unit is scalable for various applications and can integrate multiple solar panels depending on environmental factors such as partial shading from foliage. Other configurations are also available such as multiple external light fixtures from one MSL for applications such as toilet cubicles.

Product Supplied: GFS-50-MSL solar powered Modular Shelter LED Light

RESULTS

Testimonial “The solar powered Modular Shelter LED Light (MSL) was ideal for our project as we did not have a power supply close by and the dual lighting mode provided all night illumination with one bank of LED lights with another bank coming on whenever any movement is detected.

The builder’s electrician had no issues with the installation, thanks to the step by step installation guide. The Leopold War Memorial Committee is extremely happy with the MSL and the improved night time passive surveillance afforded by this innovative fitting.”

Peter Jeffreys - Project Coordinator | Leopold War Memorial Committee
